

PART 1 — Define the AI Problem (Week 1)

No code this week. This part is a written formalization only.

Task: write the formal definition of the CampusMind navigation problem, using the campus given in Section 2.

Deliverable: `01_problem-definition.pdf`, containing:

- A. Problem statement** — explain the practical problem in your own words
- B. Initial state** — the starting location
- C. Goal state** — the destination
- D. State representation** — what one state looks like, e.g. `CurrentLocation = Administration Block`
- E. Actions** — what movements are allowed
- F. Goal test** — how the system knows it has arrived
- G. Cost** — what the numbers on each connection represent
- H. State-space graph** — draw the six-location graph yourself
